

**Code:-**

```

<?php
    echo "<h1>HRISHIKESH
    KAVALE 36</h1>";

    echo "<h3>a. Write a PHP
    script to Calculate length of a string
    Without using string functions
    </h3>";

    $string = "Hrishikesh Kavale Roll
    no 36";

    $string_length = 0;
    while(@$string[$string_length] !=
    null){
        $string_length++;
    }

    echo "Length of $string is
    $string_length : ";

    echo "<h3>b. Write PHP
    script to Count the number of words
    in string Without using string
    functions </h3>";

    $words = explode(" ",
    $string);

    echo "The number of words in
    $string are:- ".count($words);

    echo "<h3>c. Write a simple
    PHP script to demonstrate following
    built-in functions:<br>

```

```

        str_word_count( ), strlen( ),
        strrev( ), strpos( ), str_replace( ),
        ucwords( ),

        strcmp( ), strtoupper( ),
        strtolower( ) </h3>";

        echo "Length of $string using
        strlen() is:- ".strlen($string);

        echo "<br>Words in $string
        using str_word_count() is:-
        ".str_word_count($string);

        echo "<br>Printing Hello in
        reverse:- ".strrev("Hello");

        echo "<br>Position of Kavale
        in $string is:-
        ".strpos($string,"Kavale");

        echo "<br>Using replace
        function:-
        ".str_replace("no","number",$string)
        ;

        echo "<br>".ucwords("hello
        world");

        echo
        "<br>".strcmp("Hello","Hello1");

        echo
        "<br>".strtoupper("hrishikesh
        kavale");

        echo
        "<br>".strtolower("HRISHIKESh
        Kavale");

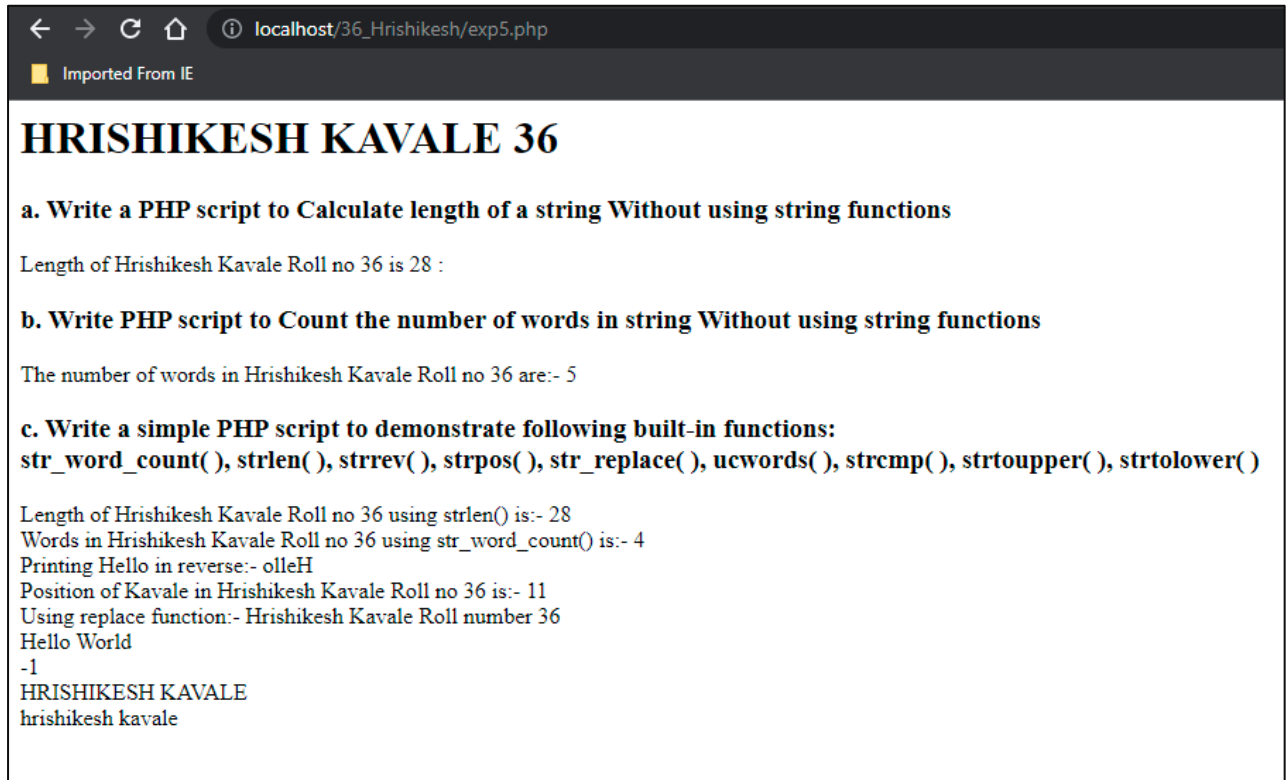

```

```

?>

```

**Output:-**

The screenshot shows a web browser window with the address bar displaying 'localhost/36\_Hrishikesh/exp5.php'. Below the address bar, there is a yellow icon and the text 'Imported From IE'. The main content area of the browser displays the output of a PHP script. The output starts with the name 'HRISHIKESH KAVALE' and the roll number '36' in a large, bold, black serif font. Below this, there are three sections labeled 'a.', 'b.', and 'c.', each containing a task description and its corresponding output. Section 'a.' shows the length of the string 'Hrishikesh Kavale Roll no 36' as 28. Section 'b.' shows the number of words in the same string as 5. Section 'c.' shows the output of several built-in PHP functions: 'strlen()' returns 28, 'str\_word\_count()' returns 4, 'strrev()' prints 'Hello in reverse:- olleH', 'strpos()' returns 11, 'str\_replace()' shows the string with 'Roll number' replaced by 'Roll number 36', 'ucwords()' prints 'Hello World', 'strcmp()' returns -1, 'strtoupper()' prints 'HRISHIKESH KAVALE', and 'strtolower()' prints 'hrishikesh kavale'.

Imported From IE

HRISHIKESH KAVALE 36

a. Write a PHP script to Calculate length of a string Without using string functions

Length of Hrishikesh Kavale Roll no 36 is 28 :

b. Write PHP script to Count the number of words in string Without using string functions

The number of words in Hrishikesh Kavale Roll no 36 are:- 5

c. Write a simple PHP script to demonstrate following built-in functions:
str_word_count(), strlen(), strrev(), strpos(), str_replace(), ucwords(), strcmp(), strtoupper(), strtolower()

Length of Hrishikesh Kavale Roll no 36 using strlen() is:- 28
Words in Hrishikesh Kavale Roll no 36 using str_word_count() is:- 4
Printing Hello in reverse:- olleH
Position of Kavale in Hrishikesh Kavale Roll no 36 is:- 11
Using replace function:- Hrishikesh Kavale Roll number 36
Hello World
-1
HRISHIKESH KAVALE
hrishikesh kavale
```

**Code:-**

```
<?php
    echo "<h1>HRISHIKESH KAVALE 36</h1>";

    echo "<h3>a.Write PHP script to calculate sum of two numbers with
parameter and return value. </h3>";

    function addTwoNumbers(int $x, int $y)
    {
        return $x + $y;
    }

    echo " sum of 10 and 25 : " . addTwoNumbers(10, 25);

    echo "<h3>b.Write PHP script to calculate cube of a number without parameter
and return value. </h3>";

    function cube()
    {
        $num = 2;
        echo "Cube of $num is :- ".$num**$num*$num;
    }

    cube();

?>
```

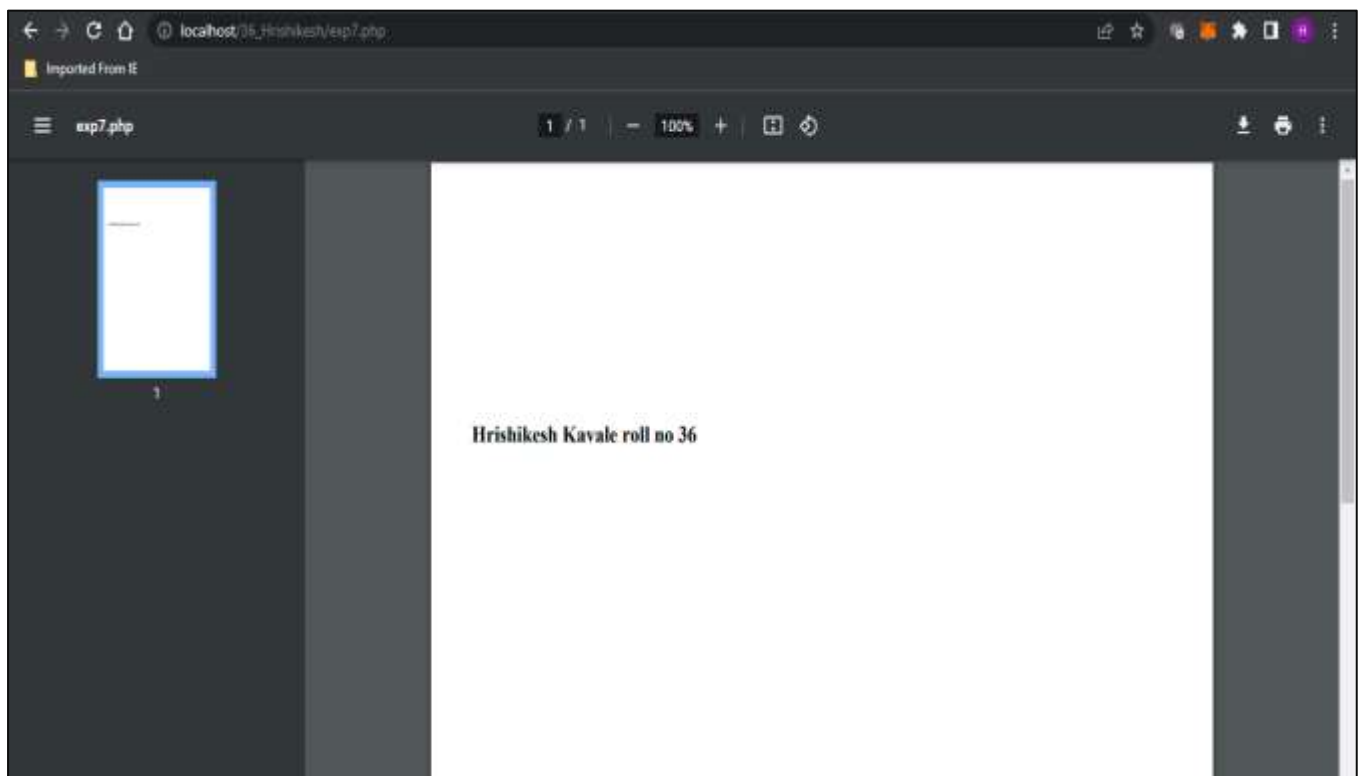

**Output:-**

**Code:-**

```
<?php  
require('C:/xampp/php/pear/fpdf/fpdf.php');  
$pdf=new fpdf();  
$pdf->addpage();  
$pdf->setfont("Times","B",14);  
$pdf->cell(100,100,"Hrishikesh Kavale roll no 36");  
$pdf->output();  
?>
```

**Output:-**

## Experiment 8 –A

```
<?php
// The parent class
class Car {
    //The $model property is now
    protected, so it can be accessed
    // from within the class and its child
    classes

    protected $model;

    //Public setter method
    public function setModel($model)
    {
        $this->model = $model;
    }
}

// The child class
class SportsCar extends Car {
    //Has no problem to get a protected
    property that belongs to the parent

    public function hello()
    {
        return "beep! I am a <i>" . $this->
        model . "</i><br />";
    }
}

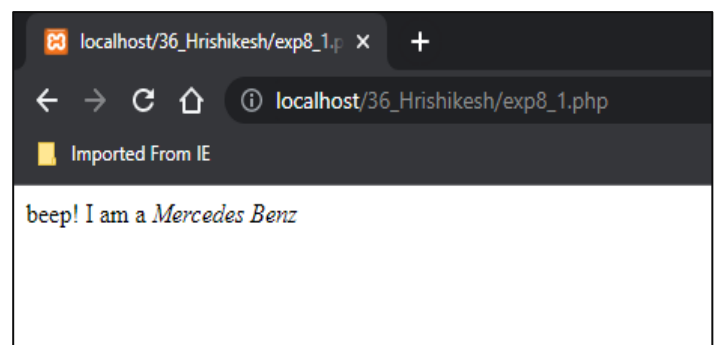

//Create an instance from the child
class

$sportsCar1 = new SportsCar();
```

```
//Set the class model name
$sportsCar1->setModel('Mercedes
Benz');

//Get the class model name
echo $sportsCar1->hello();

?>
```

## Experiment 8-B

```
<?php
class Employee

## Experiment 9-B

```
<?php
$data = serialize(array('hello',42,array(1, 'two'),'apple'));
echo $data . "<br>";
$test = unserialize($data);
echo var_dump($test);
//foreach($test as $value)
//echo $value." ";
?>
```

## Experiment 10

### Html

```
<form action="exp10.php"
method="post">
<fieldset>
<table align="center">
<legend> Enter Details </legend>
<tr>
<td> Name: </td>
<td> <input type="text"
name="name"></td>
</tr>
<tr>
<td> Gender:</td>
<td> <input type="radio"
name="year" value="First"> First
Year
<input type="radio" name="year"
value="Second"> Second Year
<input type="radio" name="year"
value="Third"> Third Year</td>
</tr>
<tr>
```

```
<td>Languages:</td>
<td><input type="checkbox"
name="branch[]" value="CO"> CO
<input type="checkbox"
name="branch[]" value="ME"> ME
<input type="checkbox"
name="branch[]" value="CE"> CE
<input type="checkbox"
name="branch[]" value="IT">IT
<input type="checkbox"
name="branch[]"
value="EJ">EJ</td>
</tr>
<tr>
<td align="center" colspan="2">
<input type=submit
name="submit">
</td>
</tr>
</table>
</fieldset>
</form>
```

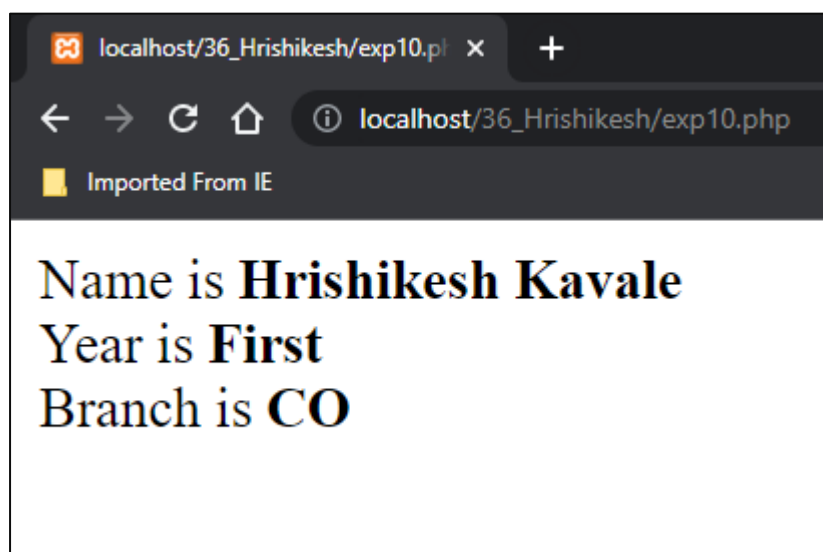

## Php:

```
<?php  
  
$name = $_REQUEST["name"];  
  
$year = $_REQUEST["year"];  
  
$branch = $_REQUEST["branch"];  
  
echo "Name is <b> $name </b> <br>";  
  
echo "Year is <b> $year </b> <br>";  
  
echo "Branch is ";  
  
foreach($branch as $i) echo "<b> $i </b>";?>
```

A screenshot of a web browser window showing a form titled "Enter Details". The form contains the following fields and options:

- Name:
- Gender: ☒ First Year ☐ Second Year ☐ Third Year
- Languages: ☒ CO ☐ ME ☐ CE ☐ IT ☐ EJ
- Submit:

A screenshot of a web browser window showing the output of the PHP script. The output is displayed in a large, bold, black serif font:

Name is **Hrishikesh Kavale**  
Year is **First**  
Branch is **CO**

## Experiment 11

### Html:

```
<form action="exp11.php"
method="post">

<fieldset>

<table align="center">

<legend> Enter Details </legend>

<input type="hidden"
name="exp_no" id="exp"
value="11.1"/>

<tr>

<td> Name: </td>

<td> <input type="text"
name="name"></td>

</tr>

<tr>

<td>City:</td>

<td><select name="city" size = "3">

<option value="Hyderabad">
Hyderabad </option>

<option value="Delhi"> Delhi
</option>

<option value="Chennai"> Chennai
</option>

<option value="Mumbai"> Mumbai
</option>

<option value="Banglore">
Banglore </option>

</select></td>

</tr>

<td align="center" colspan="2">
<input type="submit"
name="submit">

</td>

</tr>

</table>

</fieldset>

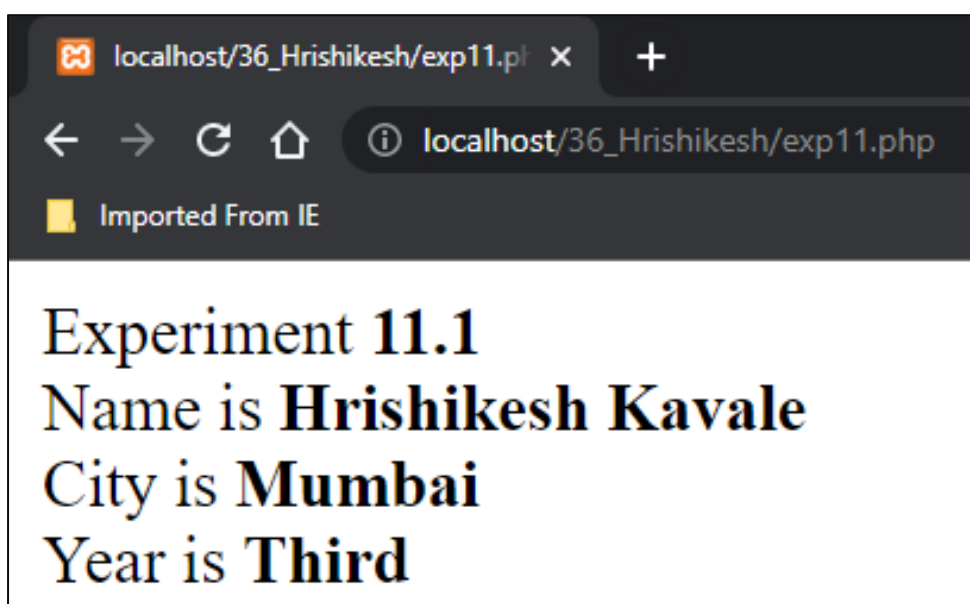

</form>
```

## PHP:

```
<?php  
  
$name = $_POST["name"];  
  
$city = $_POST["city"];  
  
$year = $_POST["year"];  
  
$exp_no = $_POST["exp_no"];  
  
echo "Experiment <b>$exp_no</b><br/>";  
  
echo "Name is <b> $name </b> <br/>";  
  
echo "City is <b> $city </b> <br/>";  
  
echo "Year is <b> $year </b>";  
  
?>
```

A screenshot of a web browser window showing a form titled "Enter Details". The form contains three input fields: "Name:" with the value "Hrishikesh Kavale", "City:" with a dropdown menu showing "Chennai", "Mumbai" (selected), and "Bangalore", and "Year:" with a dropdown menu showing "Third Year". A "Submit" button is located below the "Year" field.

A screenshot of a web browser window showing the output of the PHP script. The browser address bar shows "localhost/36\_Hrishikesh/exp11.php". The page content displays the following text:

**Experiment 11.1**  
**Name is Hrishikesh Kavale**  
**City is Mumbai**  
**Year is Third**
